## A FEW TYPICAL SANITAIRE INSTALLATIONS

**S**ANITATION, so vital to the safeguarding of health, has long been neglected in trailer homes. Standard household fixtures are not practical for trailer use because of the large quantity of water required and also because of the excessive weight and size.

The SANITAIRE, designed under Salsbury patents, fills the sanitation requirement for trailers. It is light weight, compact, and operates on only **one pint of water**. It is water sealed and does not require the use of chemicals.

No longer is it necessary for the trailer traveler to consider the accessibility of public rest rooms when parking during the day or night. SANITAIRE provides the modern sanitary convenience and security of the city home in your trailer at all times.

You cannot afford to gamble with health. Be safe with a SANITAIRE.

### Bacteriologist's Statement

I have been interested in trailers for a number of years, but I could not become enthusiastic about personally traveling in a trailer until I found that the sanitation problem had been solved.

I have made a study of the Sanitaire and the Sanitaire Capsule which you recommend being used in connection therewith, and it is my belief that the Sanitaire is a scientific contribution of paramount importance to the prevention of disease and contamination in the trailer field.

Anyone may now safely enjoy this great outdoor medium of the trailer with the comfort and convenience of the modern home.

Very truly yours,

ROBERT LEE WILLIAMS, Bacteriologist  
Member California Association Clinical Lab.

### SANITAIRE CAPSULE

The disposal of waste matter has long been a problem of paramount importance in the application of sanitary conveniences to the trailer field.

To the owners of trailers equipped with SANITAIRE this problem need cause no concern. The SANITAIRE CAPSULE takes care of this requirement in a scientific manner. Its function is to destroy pathogenic bacteria, eliminate objectionable odors, dissolve solids and to render the waste products of the tank sterile and harmless to vegetation.

It is recommended that one SANITAIRE CAPSULE be deposited in the tank every two weeks while the trailer is in use. Simply drop one Capsule in the SANITAIRE and flush it down into the tank. When parking the trailer it is suggested that a hose be connected to the overflow connection and the tank drained through this hose to a sewer connection. Under this system, the tank need be thoroughly flushed only once every three to six months, depending on the amount of use.

The cost of SANITAIRE CAPSULES is very small, only 50c for a box of six. This amounts to slightly over 4c per week while the trailer is in use.

**S**ANITAIRE is rapidly becoming recognized as the answer to the sanitation problem in trailers. In addition to installation in trailers, motor coaches, airplanes, country homes and portable dressing rooms for motion picture stars, many other uses have been developed for this efficient sanitation necessity.

### PROVEN FEATURES

- 1—Low water consumption; uses only one pint.
- 2—Hygienic—Perfect water seal.
- 3—Noiseless in operation.
- 4—Sanitaire Capsules simplify waste disposal.
- 5—Compact—Only small space required.
- 6—Attractive in appearance.
- 7—Easily installed.
- 8—Built to endure.
- 9—Equipped with standard size seat.
- 10—No chemicals required.

### Sanitary Engineer's Statement

For perfect sanitation demanded by health authorities, the SANITAIRE for trailers fills a long felt need.

GEORGE DUNCAN

Sanitary Engineer

### What the Trailer Owner Says

I have been a trailer owner for years and about a year ago I had a Sanitaire installed.

Not until my trailer was equipped with a Sanitaire did I realize the complete satisfaction out of trailer life.

I would not think of buying another trailer unless it is equipped with a Sanitaire.

Yours truly,

JESS RAGAN

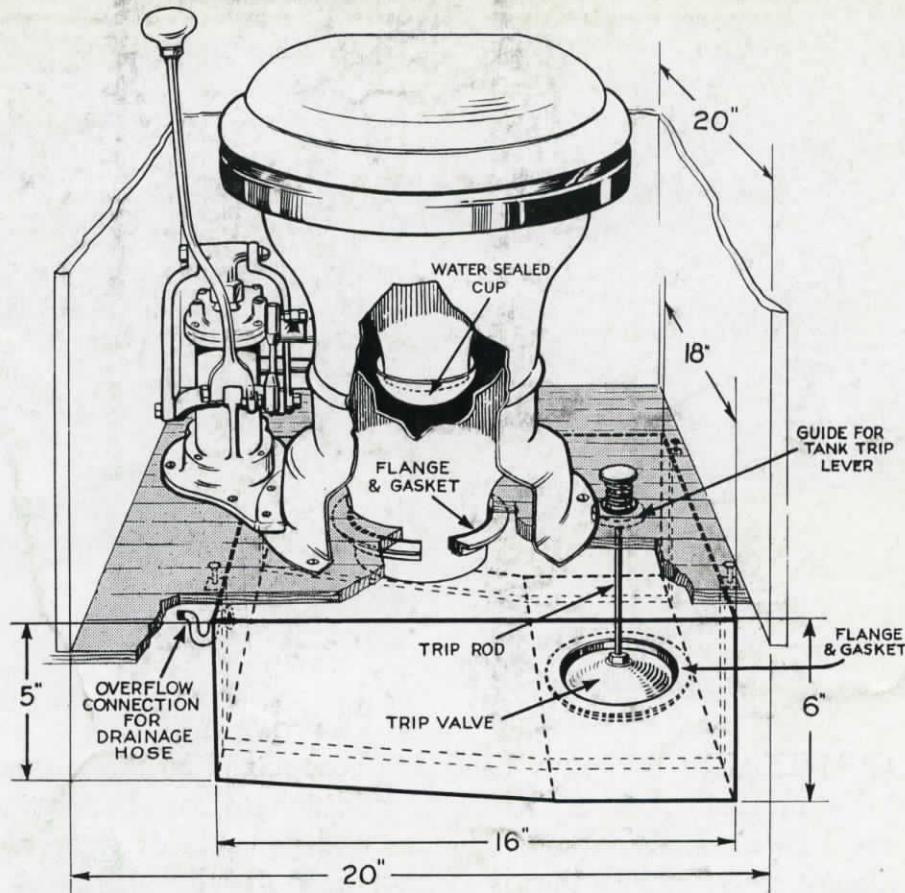

Model B  
Valve Type

Model A  
Pump Type

# INSTALLATION DRAWING

SANITAIRE is built in two models:

Model A—Equipped with double acting pump for use in trailers not having water pressure. Operation of handle downward flushes, and upward pull closes and refills water seal.

Model B—Equipped with delayed action valve which operates on water pressure system of 10 to 50 pounds pressure.

SPECIAL TANK FITTINGS are furnished with each SANITAIRE at no additional cost (see drawing).

The installation of the SANITAIRE is very simple, as will be noted from the drawing above.

The size of tank to be placed beneath the floor of the

trailer is governed by the space available. A tank of 5 to 10 gallon capacity is recommended. This tank should be made from 24-gauge galvanized sheet iron. SANITAIRE fittings, which come with each SANITAIRE, should be furnished the tank maker and made an integral part of the tank as per drawing.

As ordinances are contemplated in certain localities prohibiting the drainage of waste water from trailers on to the street or roadway, we suggest that drainage from the sink, ice box and wash basins be connected to this tank. It is advisable to "trap" these drains at or near their source.

When tank is fastened in position, connect water to SANITAIRE and the installation is complete.
